### Conversion Factors and Abbreviations

Except for geophysical and related units of measure, only the "inch-pound" system is used in this report. Abbreviations and conversion factors from inch-pound to International (metric) units are listed below.

<u>Multiply</u>	<u>By</u>	<u>To obtain</u>
Feet (ft)	0.3048	Meters (m)
Miles (mi)	1.609	Kilometers (km)

Geophysical and related units used in this report are as follows:

For gravity, milligals (mgal).

For density, grams per cubic centimeter ( $\text{g/cm}^3$ ).

### National Geodetic Vertical Datum of 1929

In this report, the term "National Geodetic Vertical Datum of 1929" (or its abbreviation, "NGVD of 1929") replaces the formerly used term "mean sea level." The datum is derived from a general adjustment of the first-order leveling networks of both the United States and Canada.

PRINCIPAL FACTS FOR GRAVITY STATIONS  
IN THE WESTERN ARM OF THE BLACK ROCK DESERT, NEVADA

---

Donald H. Schaefer and Douglas K. Maurer

---

Abstract

Principal facts for 469 gravity stations in the Black Rock Desert include: Latitude, longitude, elevation, observed gravity, free-air anomaly, terrain correction to 103.6 miles, and simple and complete Bouguer anomaly values, at a density of 2.67 grams per cubic centimeter.

## Introduction

During January through August 1979, gravity measurements were made at 469 stations in the western arm of the Black Rock Desert, between Gerlach and Soldiers Meadow, Nev.

Horizontal control for most stations in the southern part of the study area was obtained from a radar positioning system. Peripheral bedrock stations were tied to these stations with an electronic transit. In the northern part of the study area, bench marks, section corners, and road intersections were used, along with an electronic transit, to locate stations.

The accurate horizontal positions allowed elevations for the stations to be taken from 1:24,000-scale topographic maps with sufficient accuracy for the gravity survey.

The gravity observations were made with a Worden<sup>1</sup> temperature-controlled gravimeter with a scale factor of 0.0965 mgal per scale division. Four base stations in the study area were established, and one was occupied at the beginning, middle, and end of each working day. The base stations were tied to a U.S. Department of Defense gravity station located in Gerlach and having a standard absolute gravity value of 979,828.16 mgal (Peterson and Kaufmann, 1978, p. 5).

Principal facts and gravity data for each of the 469 stations are listed in table 1.

---

1. Use of brand names in this report is for descriptive purposes only and does not constitute endorsement by the U.S. Geological Survey.

TABLE 1.--Principal facts for gravity stations

Station number: Gravity station number.

Latitude: North latitude, in degrees, minutes, and hundredths of minutes.

Longitude: West longitude, in degrees, minutes, and hundredths of minutes.

Elev.: Land-surface elevation in feet above National Geodetic Vertical Datum of 1929.

Observed gravity: Observed gravity, in milligals.

Terrain correction: Total terrain correction within a radius of 103.6 mi, at a density of 2.67 g/cm<sup>3</sup>.

Free air anomaly: Free air anomaly, in milligals .

Sim. Bouguer anomaly: Simple Bouguer anomaly, in milligals, at a reduction density of 2.67 g/cm<sup>3</sup>.

Comp. Bouguer anomaly: Complete Bouguer anomaly, in milligals, at a reduction density of 2.67 g/cm<sup>3</sup>.
