## COMPLETE BOUGUER GRAVITY MAP OF THE TONOPAH 1°X2° QUADRANGLE, NEVADA

### ABSTRACT

The complete Bouguer gravity map of the Tonopah 1°X2° quadrangle is a compilation of 3,346 gravity stations. Data for the majority of these stations were measured by field crews from the U.S. Geological Survey. Data for 193 stations were obtained from the repository files of the U.S. Department of Defense, Gravity Surveys Division, and are widely scattered over the map. Data for 127 stations were obtained from Northwestern University and are located in the western part of the map. The Nevada Bureau of Mines and Geology also established 146 stations in the area around Tonopah. The gravity-station values have all been converted to the International Gravity Standardization Network datum and the map is machine contoured.

### INTRODUCTION

The accompanying map (fig. 1) shows the complete Bouguer gravity map of the Tonopah 1°X2° quadrangle, Nev. The U.S. Geological Survey (USGS) gravity survey was accomplished in two phases: (1) From the vicinity of Tonopah and eastward the work was sponsored by the U.S. Department of Energy (formerly the U.S. Energy Research and Development Administration), and (2) west of Tonopah the fieldwork was accomplished as part of the U.S. Geological Survey's Nevada tectonic project. A reconnaissance gravity map of the area east of long. 117°15' was reported by Healey (1975). Principal facts for gravity stations within this same area were reported by Healey and Currey (1977). Principal facts for stations in the western part of the sheet were reported by Healey (1976). Field crews from Northwestern University (Cogbill, A. H., written commun., 1975) established 127 stations in the western part of the study area. The Nevada Bureau of Mines and Geology established 146 stations in and around Tonopah (Erwin, 1968). Data for 193 stations were obtained from the repository files of the U.S. Department of Defense, Gravity Surveys Division (written commun., 1974) and are widely scattered over the map. Likewise, data obtained from D. R. Mabey of the USGS (written commun., 1963) are few in number and are scattered along bench-mark lines.

The map scale (fig. 1) is 1:250,000 and the contour interval is 5 mGals. The gravity stations are shown as open circles. Gravity base stations were established at convenient locations during the gravity survey and are shown on the map as solid triangles. Descriptions for these gravity base stations are given in the appendix.

The principal gravity reference datum was 979,462.25 mGals at base station Tonopah J located at the Nye County airport (Defense Mapping Agency, Aerospace Center, written commun., 1974).

The values for all the base stations shown on the map and listed in the appendix have been adjusted to the International Gravity Standardization Network (IGSN) (International Association of Geodesy, 1971, p. 60). All the gravity data herein reported (table 1) are converted to the IGSN datum. These data supersede the two above mentioned references on principal facts (Healey, 1976, and Healey and Currey, 1977).

#### REDUCTION OF DATA

The gravity data herein reported have been reduced to the complete Bouguer values by standard reduction procedures (Nettleton, 1976) that include the following corrections. The principal reduction density was  $2.67 \text{ Mg/m}^3$ . Corrections for latitude, elevation, and instrument drift were applied. After January 1971, corrections for Earth tides were also applied. Prior to that time, repeated base observations were made to account for this correction. Terrain corrections through either zone H or zone L (Hammer, 1939) for each station were either hand computed or estimated (in low-lying areas) from adjacent stations. The total terrain correction to a radial distance of 166.7 km was determined by the Plouff (1966) computer program. This program utilizes two sets of maps on which the topography is digitized in 1X1 and 3X3 minutes of latitude and longitude.

The accuracy of the data herein reported was summarized by Healey (1976, p. 3) as ranging from  $\pm 0.3$  mGals in the valleys to as much as 1.0 mGal in the elevated ranges.

The accompanying complete Bouguer map consists of 3,346 gravity stations and was machine contoured using a contour routine name "CONTOUR" which was originally written by G. I. Evenden of the USGS in 1975 and adapted to the Honeywell multics system by R. R. Wahl.

#### PRINCIPAL FACTS

With the exception of the 146 gravity stations established by the Nevada Bureau of Mines and Geology, the principal facts for all stations shown on the Tonopah  $1^\circ \times 2^\circ$  quadrangle are listed in table 1. The principal facts for the Nevada Bureau of Mines and Geology data are not readily available. However, these data were used as supplementary control for the contouring on figure 1.

The column headings on each page of the table are self explanatory. The Tonopah map was contoured from the complete Bouguer values derived from density  $d_1 = 2.67 \text{ Mg/m}^3$ .
