Beowawe; Time-domain EM, galvanic soundings
gravity survey.*

APPENDIX I
TIME DOMAIN ELECTROMAGNETIC
SOUNDING DATA

INTRODUCTION

One hundred sixteen (116) Time Domain Electromagnetic stations were performed as part of the Beowawe Prospect. The listings of the processed stations are presented alphabetically and by component, eg., D14:Hz, Ep and Eper. Hz is the vertical magnetic field measurement. Ep represents the horizontal electric field parallel to the source, and Eper is the horizontal electric field perpendicular to the source.

There are 16 stations at which one of the two E field could not be processed due to extremely low signal to noise condition.

Stations H11, M11, I14 (source 1) and R5 could not be digitized from the analog tape due to frequency interference.
