# HYDROLOGIC UNIT MAP—1974 STATE OF IDAHO

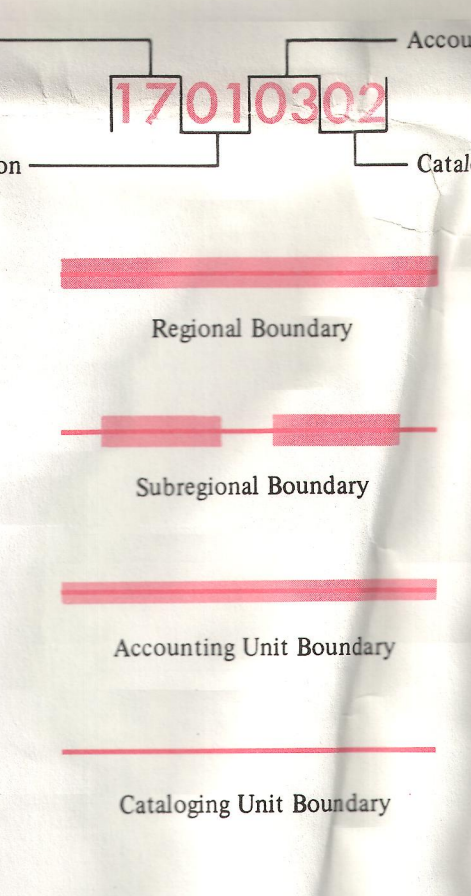

### EXPLANATION

This map and accompanying table show Hydrologic Units that are basically hydrographic in nature. The Cataloging Units shown were compiled by the Cataloging Unit personnel of the U.S. Geological Survey in its Catalog of Information on Water Data (1964-72). The previous U.S. Geological Survey Cataloging System was by map number and letter, such as 4995. The boundaries shown have been adapted from "The Catalog of Information on Water Data" (1972), "Water Resources Regions and Subregions for the National Assessment of Water and Related Land Resources" by the U.S. Water Resources Council (1970), "River Basins of the United States" by the U.S. Soil Conservation Service (1961), 1970 "River Basin Maps Showing Hydrologic Sections" by the Inter-Agency Committee on Water Resources, Subcommittee on Hydrology (1961), and State planning maps.

The Political Subdivision Code has been adopted from "Counties and County Equivalents of the States of the United States" presented in Federal Information Processing Standards Publication 6-73, issued by the National Bureau of Standards (1973) in which each county or county equivalent is identified by a Schenker State code and a 3-character county code.

The Regions, Subregions and Accounting Units are approximations of the Cataloging Units. The Regions and Subregions are currently (1974) used by the U.S. Water Resources Council for comprehensive planning, including the National Assessment, and as a standard geographical framework for more detailed water and related land-resources planning. The Accounting Units are those currently (1974) in use by the U.S. Geological Survey for managing the National Water Data Network.
