

## Additional information on MF-1127

This map contains an error in the thickness of the Pawnee coal bed in representative sect. 5 of cross section B-B'. The Pawnee coal bed was plotted as 3 feet thick instead of 19 feet thick; thus it is a major coal bed along the extent of its outcrop.

The revised trace of the thickness of the Pawnee coal bed between the section immediately southwest of representative sect. 4 and the section immediately northeast of representative sect. 5 is shown by the following sketch (at the same scale as cross section B-B').
