RE: Well Completion or Recompletion Report
and Log for Hole No. 14-7 - McCoy Unit

Dear Mr. Moroz:

With regard to the McCoy Unit, please find enclosed, in triplicate, "Well Completion or Recompletion Report and Log" concerning AMAX Exploration, Inc.'s suspended operations at Hole No. 14-7. Suspension of operations does not constitute abandonment of Hole No. 14-7, since further temperature observation measurements and other surveys may be conducted on Hole No. 14-7.

Field prints of the following logs were submitted to your office on June 5, 1980:

- 1) Dual Induction Log - 16" Normal
- 2) Dual Induction Log - 16" Normal (5" scale)
- 3) Compensated Density Log
- 4) Compensated Density Log (5" scale)
- 5) Compensated Acoustic Velocity Log
- 6) Compensated Acoustic Velocity Log (5" scale)

AMAX Exploration, Inc. is still attempting to receive final logs from Welex. As soon as we receive this information, copies will be immediately submitted to your office.

Please also find enclosed one copy of the deviation survey and the temperature/depth log for Hole No. 14-7. Water chemistry analysis for Hole No. 14-7 is unavailable because an uncontaminated sample could not be collected. Detailed lithology information is unavailable because of extensive lost circulation zones resulting in no returns to the surface. As soon as more lithology information is available it will be submitted to your office.

If I can be of further assistance in explaining this information, please do not hesitate to call.

Sincerely,

Wendy E. Merrill
