

GEOHERMAL BRANCH

INTER-OFFICE MEMORANDUM

SUBJECT: Drill Hole Cuttings Geochemistry - Deeth Area

DATE: April 2, 1981

TO: J. E. Deymonaz

FROM: H. D. Pilkington

Two thermal gradient wells at Deeth were selected to test for presence of gold within the Tertiary Humboldt formation. The results are shown below:

<u>Hole #</u>	<u>Sample #</u>	<u>Depth</u>	<u>Au (ppm)</u>
1030-19	B29091	40-80 ft	0.02
-20	B29092	40-80 ft	0.02

Selected intervals should be selected from the shallow gradient drilling program this year to provide a better statistical distribution to our gold study.

H. D. Pilkington
