David Langton,

I got your email address from Jeff Hulen, I'm working with UNAVCO, Inc which is a NSF funded nonprofit group. We are going to install eight borehole strainmeter/seismic sites in the medicine lake/ mt. Shasta area. Jeff said you have core samples from this region . We would like to look at any samples from the medicine lake region. The strainmeters are installed into drilled holes at depths between 500-800 ft and require a 10-15 ft section of compotent unfractured rock (always a problem). Looking at core samples may help us determine the best locations for these sites. I am scheduled to go to Salt Lake City on Jan 27 to meet with Dennis Neilson (DOSEC) and I was hoping to possible schedule a time and date around the 27th to visit your facility??? Let me know if this could be possible. If you want more information about UNAVCO and the project go to:

www.unavco.org
the click on earthscope/pbo project

thanks
Bob Mueller
