

LITHOLOGIC LOG

Project: Livermore

620-38

Elevation: _____

Date Drilled: 7/4/79

Depth (m)	Description
0- 4	<u>Regolith</u> - Reddish brown silt and clay with angular serpentinite gravels.
4-61	<u>Serpentinite</u> - Brownish red to green aphanitic hard, appears slightly silicified. Minor magnesite veining. Iron staining along numerous small tight fractures.
61-79	<u>Serpentinite</u> - Mostly dark green, fairly soft, highly sheared. Magnesite filled fractures common, some Fe staining along tight fractures.
79-82	<u>Serpentinite</u> - As above, with some fracturing as evidenced by light green silica fracture filling material.
82-98	<u>Serpentinite</u> - As between 61-79 m.
