

NOTES ON PRUETT INDUSTRIES TEMPERATURE SURVEYS FOR GMF 17A-6

Partial data from the paper copies of the six temperature surveys by Pruett 16-24 Aug 1984 was manually entered into an Excel spreadsheet on 28 June 2007 to allow plots to be made. Due to the large size of the data set and in the interest of time, not all points were entered. However, the resolution is certainly adequate for most purposes. The data set can be found in: Z:\Petrel\Petrel2007\WellData

Runs 1-4 had all the data from the first column entered followed by the data from every fifth line for the remainder of the data set. The last line was also included. Runs 5-6 use data from every fifth line in each column as well as the first and last lines.
